

Lock & Dam 7

(La Crescent, Minnesota) Mississippi River

U.S. ARMY CORPS OF ENGINEERS

BUILDING STRONG.

Construction: 1933-1940

General Contractors:

Lock: Nolan Brothers and Minneapolis Dredging Co., Minneapolis, Minn., and Dearborn Electrical Construction Co., Chicago, III.

Dam: Warner Construction Co., Chicago, Ill.

Congressional District: MN-1; WI-3

Description

Lock and Dam 7 is located at Mississippi River Mile 702.5 near La Crescent, Minnesota, 4.5 miles above LaCrosse, Wisconsin.

The main lock is located along the right descending bank and consists of a single lock chamber 110 feet wide by 600 feet long with an upper pool elevation of 639.0 feet, a tailwater elevation of 631.0 feet, and a vertical lift of 8.0 feet. There are miter gates at each end of the lock chamber. There is a partial auxiliary lock consisting of an upstream set of miter gates and short concrete riverwall section.

The movable dam consists of a concrete structure 940 feet long with five roller gates (20 feet high by 80 feet long), nine non-submersible Tainter gates (15 feet high by 35 feet long), and two submersible Tainter gates (15 feet high by 35 feet long), and is located adjacent to the auxiliary lock. Completing the dam system are two earthen embankment segments: the French Island embankment approximately 7,000 feet long, located between the movable dam and French Island, with a concrete overflow spillway 1,000 feet long; and the Onalaska embankment approximately 1,600 feet long, located between French Island and Onalaska, with a concrete overflow spillway 677 feet long.

The site has a public observation platform, outside displays, a visitors center, and restrooms open from dawn to dusk from April through mid-October.

History/Significance

The Lock was put in operation in April 1937. Originally scheduled to be nearer to La Crosse, this complex was relocated because of water level problems connected with the La Crosse site. The design of the complex was heavily influenced by French Island, which was incorporated into the design as a natural dike, and the Dresbach Slough, which was reopened to provide the upper approach to the lock.

At the completion of its major rehabilitation, the Corps restored the original control building into a visitors center, which is on the National Historic Register. The displays interpret the Corps role in assisting with management of the river resources.

The complex was built at a federal cost of \$6,776,000.

Annual Tonnage (20-Year Historical)

<u>Year</u>	<u>Tons</u>	<u>Year</u>	<u>Tons</u>	<u>Year</u>	<u>Tons</u>	<u>Year</u>	<u>Tons</u>
2016 2015	13,484,006 9,833,174	2011 2010	9,477,117 9,732,976	2006 2005	10,913,536 10,391,612	2001 2000	12,000,987 14,816,119
2014	9,359,996	2009	9,546,522	2004	10,786,169	1999	15,856,894
2013 2012	8,234,572 9,282,753	2008 2007	7,258,768 10,429,410	2003 2002	12,297,081 14,460,872	1998 1997	14,454,177 13,620,787

Commodity Tonnage (2016)

All Units (Ferried Autos, Passengers, Railway Cars)	-
Coal, Lignite, and Coal Coke	31,200
Petroleum and Petroleum Products	206,100
Chemicals and Related Products	2,450,300
Crude Materials, Inedible, Except Fuels	1,591,012
Primary Manufactured Goods	908,762
Food and Farm Products	8,274,960
Manufactured Equipment & Machinery	21,647
Waste Material	
Unknown or Not Elsewhere Classified	25

Vessel & Lockage Data (2016)

Average Delay - Tows (Hours)	1.04	Non-Commercial Vessels	41
Average Processing Time (Hours)	0.43	Non-Commercial Flotillas	41
Barges Empty	3,743	Non-Commercial Lockages/Cuts	41
Barges Loaded	8,650	Percent Vessels Delayed (%)	25
Commercial Vessels	2,029	Recreational Vessels	3,865
Commercial Flotillas	1,901	Recreational Lockages	1,176
Commercial Lockages/Cuts	2,538	Total Vessels	5,935
Non-Vessel Lockages	-	Total Lockages/Cuts	3,755

The 9-foot Channel Navigation Project

The 9-foot Channel Navigation Project includes 37 lock and dam sites (42 locks) on 1,200 river miles in Illinois, lowa, Minnesota, Missouri and Wisconsin. Constructed largely in the 1930s, it extends from Minneapolis-St. Paul on the Upper Mississippi River to its confluence with the Ohio River and up the Illinois Waterway to the T.J. O'Brien Lock in Chicago.

The maintenance needs of this aging infrastructure have surpassed annual operations and maintenance funding. This limited funding has adversely affected reliability of the system and has primarily resulted in a fix-as-fail strategy, with repairs sometimes requiring days, weeks or months. Depending on the nature of a failure and extent of repairs, shippers, manufacturers, consumers and commodity investors can experience major financial consequences. Additionally, today's 1,200'-long tows must split and lock through in two operations within the Project's 600' chambers. This procedure doubles and triples lockage times, increases costs and wear to lock machinery, and exposes deckhands to higher accident rates.

More than 580 facilities ship and receive commodities within the Project. Grains (corn and soybeans) dominate traffic; cement and concrete products are the second largest group. A modern 15-barge tow transports the equivalent of 1,050 semi-trucks (26,250 tons, 937,387 bushels of corn, or 240 rail cars). In 2015, the 9-foot channel project generated an estimated \$3 billion of transportation cost savings compared to its approximately \$246 million operation and maintenance cost.

UPDATE: April 2017
